

Target Series

Maximize the Price-to- Performance Ratio

Surveying and comparing specifications and prices can be tedious. Save your time with the Target Series, which consists of IP camera models that deliver quality with outstanding price-to-performance ratio.

All three models in the current Target Series lineup, including GV-EFD1100, GV-EBX1100, and GV-EBL110, are equipped with intelligent IR for night vision, defog feature, tampering alarm, privacy mask for condition alerts, and are embedded with full-featured 32 channel GV-NVR software. Traditional units of this caliber are

often chunky and expensive, but these GeoVision models are light-weight for easy installation and are well designed for both power and practicality.

If you are looking for advanced functions, GeoVision offers many other IP camera models in our lineup to meet your needs; if you are looking for a well-executed return to basics, Target Series is your choice. Designed to offer good quality with a focus on price-to-performance ratio, the Target Series keeps every installation in reach.
